

Network Connect Installation Guide

For Mac Computers

Installing the Network Connect Client

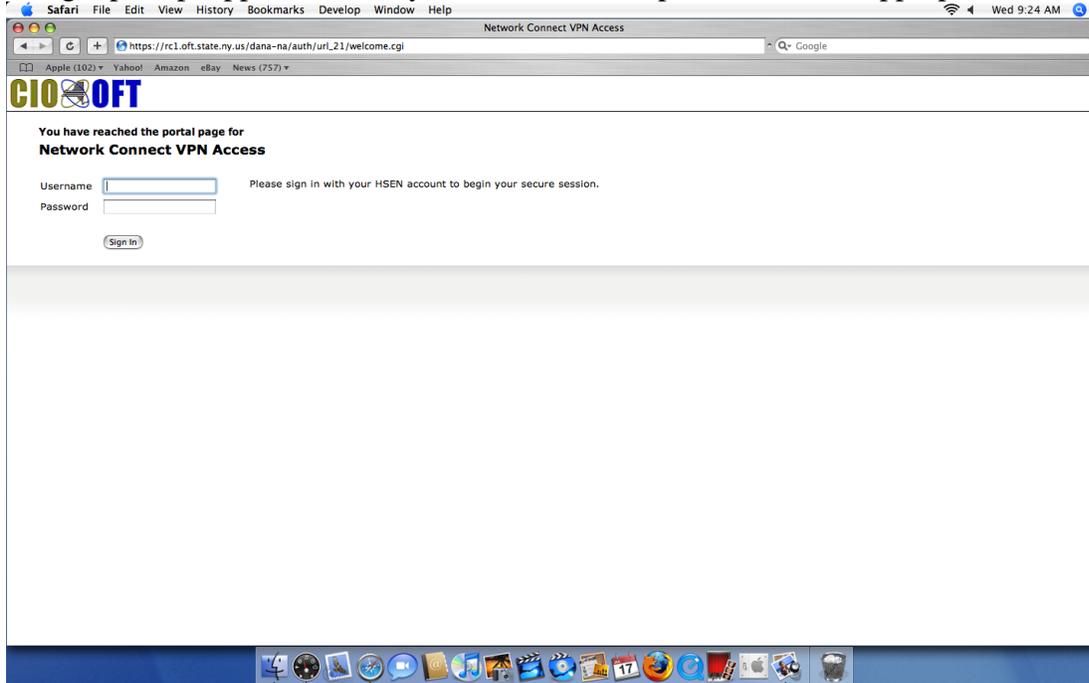

Note

- *The computer must be connected to an external (off-state network) Internet connection.*
- *It is recommended that you add the name **nc1.cio.ny.gov** to your browser's proxy exceptions list or turn off the proxy. If this change is not made, when externally connected, the browser will not be able to communicate through the internal proxy; therefore a VPN session will not be established.*
- *System Requirements: Mac OS X 10.5.0: Safari 3.0.Sun JRE 6 OR Mac OS X 10.4.3: Safari 2.0. Sun JRE 5*

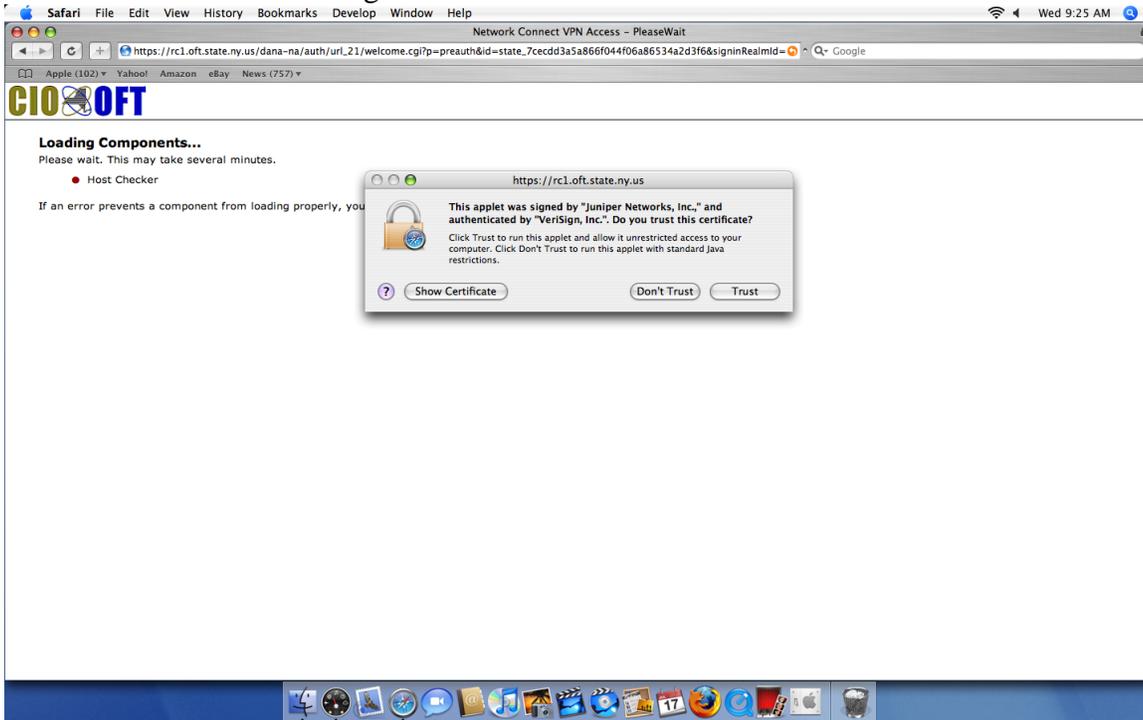

1. Launch a browser.

- a. If you will be using an HSEN domain account to access the network, type `https://nc1.cio.ny.gov/hsen/mac` into the address bar and select *Enter*.
- b. If you will be using an NYS domain account to access the network, type `https://nc1.cio.ny.gov/nys/mac` into the address bar and select *Enter*.

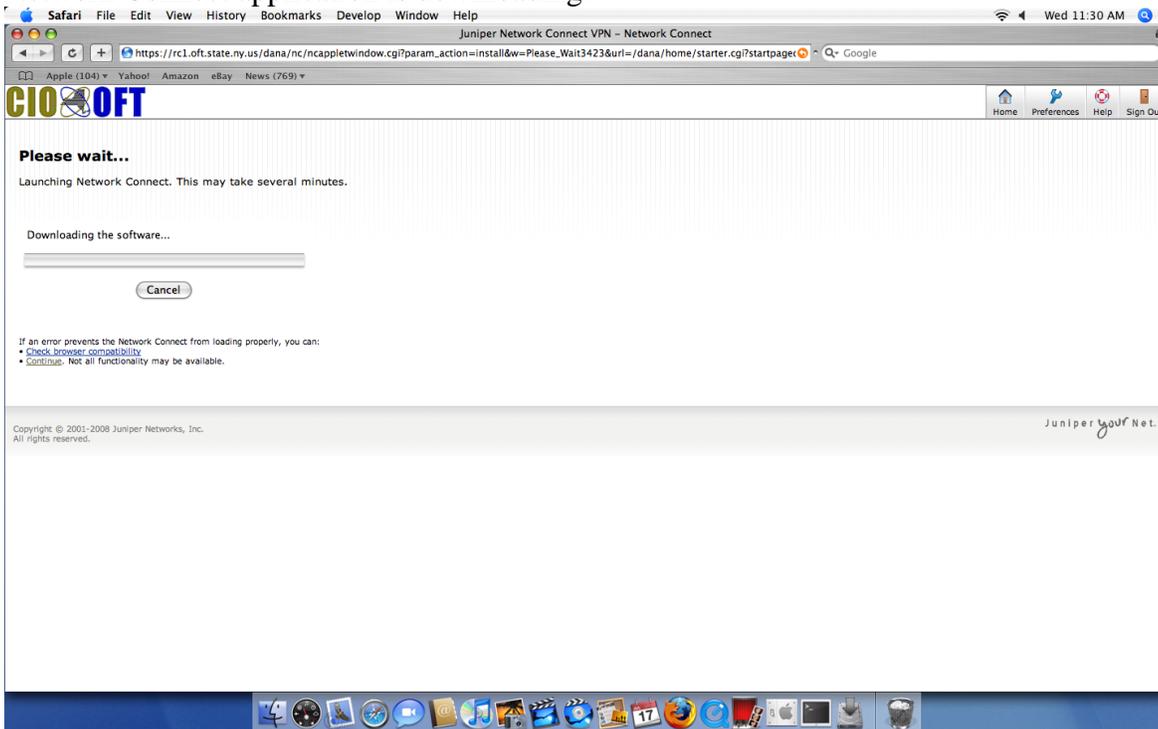

2. A login prompt appears. Enter your username and password in the appropriate boxes.

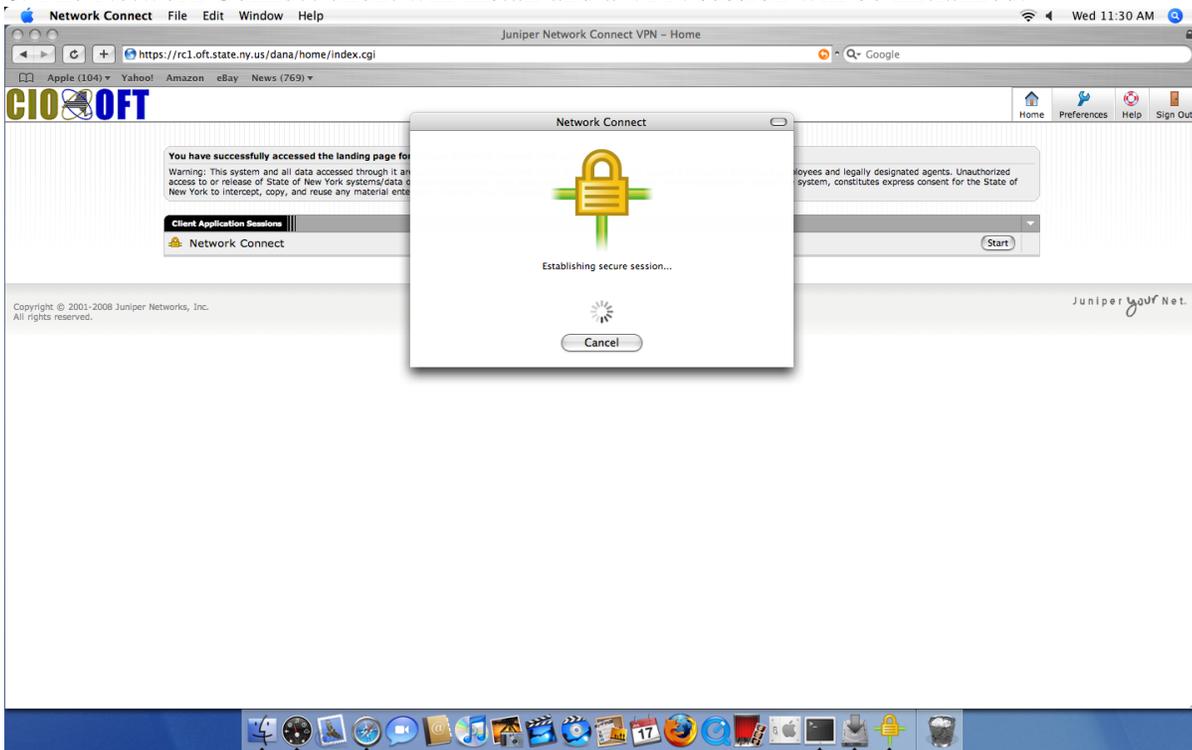

3. The Host Checker module will load and verify your computer meets security requirements. You will receive a message to trust the VPN certificate. Select Trust.

4. The Juniper Network Connect installation will begin. A progress bar appears, indicating that the Network Connect application is downloading.

6. The Network Connect client will install and a VPN session will be initialized.

7. When finished with your VPN session, close the Network Connect client by double clicking the icon located in the system tray (bottom of screen) and select *Sign Out*.
