New York State Information Technology Standard	No: NYS-S14-010
IT Standard: Remote Access	Updated: 07/16/2020
	Issued By: NYS Office of Information Technology Services Owner: Chief Information Security Office

1.0 Purpose and Benefits

This standard establishes authorized methods for remotely accessing New York State (NYS) resources and services securely.

Major security concerns with remote access include the lack of physical security controls, the use of unsecured networks, the connection of infected devices to internal networks, the availability of internal resources to external hosts, potential damage to State resources, and unauthorized access to State information. This standard attempts to address these concerns.

2.0 Authority

Section 103(10) of the State Technology Law provides the Office of Information Technology Services (ITS) with the authority to establish statewide technology policies, including technology and security standards. Section 2 of Executive Order No. 117, established January 2002, provides the State Chief Information Officer with the authority to oversee, direct and coordinate the establishment of information technology policies, protocols, and standards for State government, including hardware, software, security, and business re-engineering. Details regarding this authority can be found in NYS ITS Policy, [NYS-P08-002 Authority to Establish State Enterprise Information Technology \(IT\) Policy, Standards and Guidelines](#).

3.0 Scope

This standard applies to all “State Entities” (SE), defined as “State Government” entities as defined in Executive Order 117, established January 2002, or “State Agencies” as defined in Section 101 of the State Technology Law. This includes employees and all

third parties (such as local governments, consultants, vendors, and contractors) that use or access any IT resource for which the SE has administrative responsibility, including systems managed or hosted by third parties on behalf of the SE. While an SE may adopt a different standard, it must include the requirements set forth in this one.

4.0 Information Statement

NYS allows for remote access when there is a clear, documented business need. Access may be allowed from State-issued or personally-owned devices, at the discretion of the State Entities (SEs) and in accordance with the standards below. Such access must be limited to only those systems necessary for needed functions.

4.1 Approved Methods of Remote Access

Approved methods of remote access to NYS systems are listed in order of preference.

- a. **Portals** - a server that offers access to one or more applications through a single centralized interface that provides authentication (e.g., web-based portal, virtual desktop interface (VDI)).
- b. **Direct Application Access** – accessing an application directly with the application providing its own security (e.g., webmail, https).
- c. **Remote System Control** – controlling a system remotely from a location other than the State's internal network.
- d. **Tunneling** - a secure communication channel through which information can be transmitted between networks (e.g., Virtual Private Network (VPN)).

4.2 Required Controls

- a. Any method of remote access must use a centrally managed authentication system for administration and user access.
- b. Devices and software used for remote access must be approved by the SE after review by the SE's Information Security Officer (ISO)/designated security representative. SEs may provide blanket approvals based on this review.
- c. The authentication token used for remote access must conform to the requirements of the appropriate assurance level as per the [NYS-P20-001 Digital Identity Policy](#).
- d. Remote access sessions must require re-authentication after 30 minutes of inactivity.
- e. Remote access sessions must not last any longer than 24 hours.
- f. The SE must monitor for unauthorized remote connections and other anomalous activity and take appropriate incident response action as per the [NYS-S13-005 Cyber Incident Response Standard](#).

g. Tunneling specific controls:

- (a) No split tunneling is allowed.
- (b) Network controls regulating access to the remote access endpoint and between remote devices and SE networks are required.
- (c) When a remote access device will have access to other networked devices on the State's internal network, the remote device must be authenticated such that configuration of the device is compliant with applicable policies.

5.0 Compliance

This standard shall take effect upon publication. Compliance is expected with all enterprise policies and standards. ITS may amend its policies and standards at any time; compliance with amended policies and standards is expected.

If compliance with this standard is not feasible or technically possible, or if deviation from this policy is necessary to support a business function, SEs shall request an exception through the Chief Information Security Office [exception process](#).

6.0 Definitions of Key Terms

Except for terms defined in this policy, all terms shall have the meanings found in <http://www.its.ny.gov/glossary>.

7.0 Contact Information

Submit all inquiries and requests for future enhancements to the policy owner at:

8.0 Revision History

This standard shall be subject to periodic review to ensure relevancy.

Date	Description of Change	Reviewer
04/18/2014	Original Standard Release	Thomas Smith, Chief Information Security Officer
05/15/2015	Removed references to state workforce	Deborah A. Snyder, Deputy Chief Information Security Officer
02/24/2017	Update to Scope, contact information and rebranding	Deborah A. Snyder, Deputy Chief Information Security Officer
07/16/2020	Update to Authority, Scope and Contact Information	Karen Sorady, Acting Chief Information Security Officer
05/20/2021	Updated Scope language	Karen Sorady, Acting Chief Information Security Officer
